

# BIOAKSXTER® M31 Agriculture

## Effects

- Repowering of plant programming capacity.
- Increase in crop productivity in favor of visual, organoleptic and nutritional aspects as well as shelf life.
- Equilibrium of the vegetation, constant and homogeneous production.
- Increase in the plant's self-defenses against fungal, viral, bacterial and other diseases.
- Overcoming climate shock and stress conditions.
- Better oxygen exchange and lymphatic flow, with consequential cellular regeneration and tissue elasticity.
- Elimination of chemical residues, environmental pollutants and harmful substances in agricultural products.
- Soil depollution and revitalization.
- Recovery of microbial flora equilibrium and soil humification capacity.

## Product

BioAksxter® M31 Agriculture is the magnetic flux fertilizer that programs plant and soil equilibrium. Thanks to its advanced technology that reproduces natural processes, it regenerates vegetal structures by increasing plant potential. In addition, BioAksxter® depollutes and revitalizes the soil, and it substantially increases the quality and quantity of yields. Particularly suitable for preventing and reducing disease development through its specific action of strengthening self-defenses, it avoids the productive decline of agricultural soils and regenerates those exploited and contaminated by diseases. It is ideal for the best results of all fruit, vegetable and cereal crops as well as in the nursery crop production.

## Action

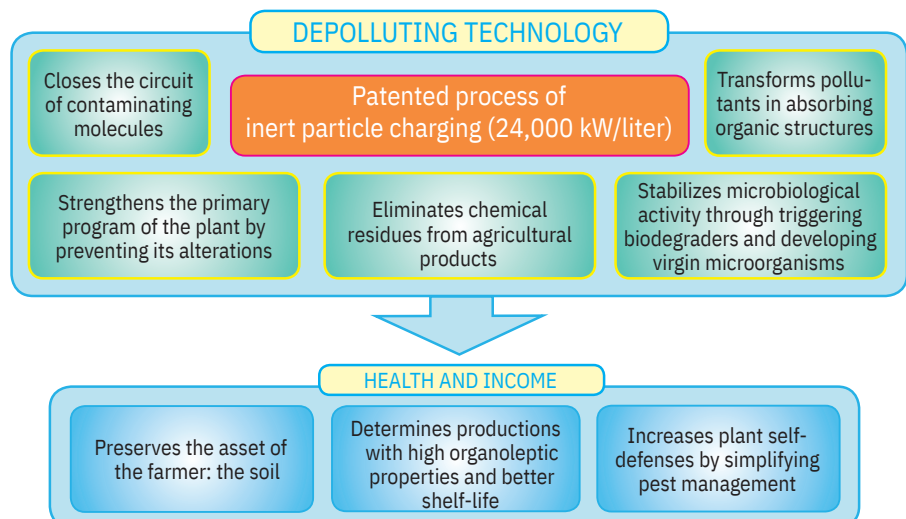

BioAksxter® M31 Agriculture reproduces the processes of natural fertilization that occurs through water-soil-plant-air exchanges. BioAksxter® M31 Agriculture is an inorganic compound that, when diluted in water, forms a pre-organic compound: it revitalizes soil through self-reproduction of "virgin" microorganisms, and it is readily assimilable by the plant of which it favors "hydropony" of nutrients, plant's programming capacity, oxygen exchanges, light absorption, regulation of lymphatic flows, and finally cell regeneration. All this translates into greater plant and soil vitality and ultimately in the best productive results.

## Unique Depolluting Technology

BioAksxter® M31 Agriculture makes up for the insufficient low-impact supply chain because the simple introduction of this advanced technology into cultivation practices closes the circuit of input contaminant molecules, bringing crops and soil back into balance. Its use eliminates chemical residues in agricultural products, it lowers basic radioactivity by preventing alterations in the plant's primary program, and consequently, phenomena of deformation and loss of self-defenses. In the soil, pollutants are transformed into organic absorption structures, and it is possible to notice a rebalancing in the microbiological activity as biodegraders are triggered. BioAksxter® M31 Agriculture is not limited to low environmental impact, it goes further, opening the frontier of depollution.

## Increases in Quality & Quantity

Without having to change agronomic techniques, methods and intervention plans, BioAksxter® M31 Agriculture revitalizes soils allowing cultivation without soil fatigue phenomena. It increases production in terms of weight, with better homogeneity and less waste. Taste, visual aspect and shelf-life are improved. It reduces spoilage of production in the field by extending harvest days. It enhances the plant's self-defenses by simplifying pest management. Agricultural production increases in significant percentages that can vary, depending on soil conditions and crop type, from 40% to 100%.

## Technical Information BIOAKSXTER® M31 Agriculture

<b>Formulation</b>	BioAksxter® M31 Agriculture is characterized by the patented process of inert particle charging, a technology created by researcher Alessandro Mendini, that, by reproducing natural processes, makes available energy useful to the strengthening of the plant program and the microbiological balance of the soil.
--------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Composition</b>	<ul style="list-style-type: none"><li>• Crystals Base - specific compound for BioAksxter® consisting of minerals formulated for universal plant programming in general (Mendini formulation)</li><li>• Magnetic charges of hydrocompressed computerized type with a capacity equal to 7.6 Gigawatts/mm<sup>3</sup> (Mendini discovery)</li><li>• Water</li><li>• Sodium molybdate 4.5-5.5%</li><li>• pH 6.5-7</li></ul>
--------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>CE Marking</b>	PFC 1(C)(II)(a): STRAIGHT INORGANIC MICRONUTRIENT FERTILISER Micronutrient solution fertiliser 2% Molybdenum (Mo), as sodium salt, water soluble Can be used in organic farming according to the current European legislation.
-------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Depolluting Technology</b>	The depolluting technology of BioAksxter® M31 Agriculture, based on the patented process of inert particle charging with energy equal to 24,000 kW/liter, closes the circuit of contaminant molecules and transforms pollutants substances into organic adsorption structures. It stabilizes soil microbiological activity through triggering biodegraders and developing “virgin” microorganisms. It strengthens the plant’s primary program by preventing alterations and loss of self-defenses. Finally, BioAksxter® eliminates chemical residues from agricultural products protecting nutritional and healthy properties.
-------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>How to use</b>	<b>Type of crop</b>	<b>Dose per hectare</b>	<b>Application</b>
	<b>Fruit growing</b> <b>Olive growing</b>	4.5 liters per year	Every 15 days from vegetative restart until harvest + 1 pre-winter treatment
	<b>Cereal growing</b>	2 liters per crop cycle	3-5 variable interventions by crop type
	<b>Horticulture in open field</b>	4.5 liters per 120-day cycle	Every 10-15 days
	<b>Greenhouse horticulture</b>	4.5 liters per 120-day cycle	Every 7 days

The number of interventions and dosage are indicative and vary, according to instructions, based on the context, type of crop and its duration.

Doses can be diluted in any volume of water.

In the case of crops affected by resistant plant diseases, it is essential to double the dosage of the first 3 interventions. In addition, triple-dose preparation interventions are appropriate or according to technical evaluations.

It is miscible with all other products and can be distributed either via root or foliar application.

Even in higher doses than indicated, it never damages the plant.

Any changes in color are due to variation in the Earth’s magnetic field.

BioAksxter® is free from harmful effects.

<b>Codice Articolo</b>	<b>Description</b>	<b>Packaging</b>	<b>Net weight</b>
M31-Mo/1L	BioAksxter® M31 Agriculture	1 liter bottle	Kg 1.030
M31-Mo/5L	BioAksxter® M31 Agriculture	5 liter tank	Kg 5.150
