

BIOAKSXTER® M31 Golf Courses

Effects

- Repowering of plant programming capacity.
- Depolluted ecosystem, green areas and bodies of water free from chemical residues and harmful substances.
- Better soil water retention and root uptake.
- Increase in the self-defenses of vegetation against fungal, viral, bacterial and other diseases.
- Overcoming climate shock and stress conditions.
- Better oxygen exchange of soil and turf.
- Soil depollution, regeneration and revitalization.
- Thick and trampling resistant turf with high aesthetic performance.

Product

BioAksxter® M31 Golf Courses is the magnetic flux fertilizer that programs plant and soil equilibrium. Thanks to its advanced technology that reproduces natural processes, it regenerates vegetal structures by increasing plant potential. It depollutes and revitalizes the soil, and also increases the plant resistance to abiotic/biotic stresses.

Particularly suitable for preventing and reducing disease development through its specific action of strengthening self-defenses, it avoids the productive decline of agricultural soils and regenerates those exploited and contaminated by diseases.

It is ideal for the best results in the management/maintenance of golf courses and areas of natural value.

Action

BioAksxter® M31 Golf Courses reproduces the processes of natural fertilization that occurs through water-soil-plant-air exchanges.

BioAksxter® M31 Golf Courses is an inorganic compound that, when diluted in water, forms a pre-organic compound: it revitalizes soil through self-reproduction of “virgin” microorganisms, and it is readily assimilable by the plant of which it favors “hydropony” of nutrients, plant’s programming capacity, oxygen exchanges, light absorption, regulation of lymphatic flows, and finally cell regeneration.

All this translates into greater soil, turf, and all plants vitality.

Unique Depolluting Technology

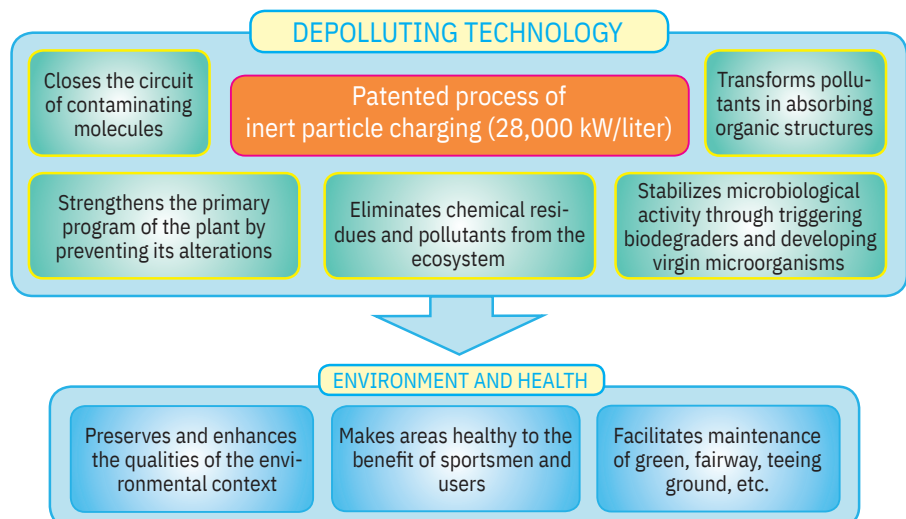

BioAksxter® M31 Golf Courses makes up for the insufficient low-impact supply chain because the simple introduction of this advanced technology into cultivation practices closes the circuit of input contaminant molecules, bringing plants and soil back into balance.

Its use eliminates pollutants and harmful substances from the environment, it lowers basic radioactivity by preventing alterations in the plant’s primary program, and consequently, phenomena of deformation and loss of self-defenses. In the soil, pollutants are transformed into organic absorption structures, and it is possible to notice a rebalancing in the microbiological activity as biodegraders are triggered. BioAksxter® M31 Golf Courses is not limited to low environmental impact, it goes further, opening the frontier of depollution.

Benefits and advantages

Without having to change agronomic techniques, methods and intervention plans, BioAksxter® M31 Golf Courses increases the plants resistance threshold, prevents and reduces the onset and spread of diseases, and limits the incidence of biotic/abiotic stresses.

The increase in plants immune defenses prevents the development of typical golf courses diseases such as Rhizoctonia, Fusarium, Sclerotinia (dollar spot), etc. BioAksxter® increases resistance to persistent acid rain, drought, temperature changes and frost, facilitating the resumption of vegetative functions and recovery from climatic-environmental stresses.

Technical Information BIOAKSXTER® M31 Golf Courses

Formulation	BioAksxter® M31 Golf Courses is characterized by the patented process of inert particle charging, a technology created by researcher Alessandro Mendini, that, by reproducing natural processes, makes available energy useful to the strengthening of the plant program and the microbiological balance of the soil.
--------------------	---

Composition	<ul style="list-style-type: none">• Crystals Base - specific compound for BioAksxter® consisting of minerals formulated for universal plant programming in general (Mendini formulation)• Magnetic charges of hydrocompressed computerized type with a capacity equal to 9.8 Gigawatts/mm³ (Mendini discovery)• Water• Sodium molybdate 4.5-5.5%• pH 6.5-7
--------------------	---

CE Marking	PFC 1(C)(II)(a): STRAIGHT INORGANIC MICRONUTRIENT FERTILISER Micronutrient solution fertiliser 2% Molybdenum (Mo), as sodium salt, water soluble Can be used in organic farming according to the current European legislation
-------------------	--

Depolluting Technology	The depolluting technology of BioAksxter® M31 Golf Courses, based on the patented process of inert particle charging with energy equal to 28,000 kW/liter, closes the circuit of contaminant molecules and transforms pollutants substances into organic adsorption structures. It stabilizes soil microbiological activity through triggering biodegraders and developing “virgin” microorganisms. It strengthens the plant’s primary program by preventing alterations and loss of self-defenses. BioAksxter® eliminates chemical residues and pollutants from green areas and bodies of water.
-------------------------------	---

How to use	Type of crop	Dose per hectare	Number of operations	Application
	Turf and ornamental species	4.8 liters per year	10 + 2	Every 20 days for the main green areas + start and end of the season on the entire green area
<p>The number of interventions and dosage are indicative and vary, according to instructions, based on the context, type of crop and its duration. Doses can be diluted in any volume of water. In the case of crops affected by resistant plant diseases, it is essential to double the dosage of the first 3 interventions. In addition, triple-dose preparation interventions are appropriate or according to technical evaluations. It is miscible with all other products and can be distributed either via root or foliar application. Even in higher doses than indicated, it never damages the plant. Any changes in color are due to variation in the Earth’s magnetic field. BioAksxter® is free from harmful effects.</p>				

Item Code	Description	Packaging	Net weight
