

Product Data Sheet

BIOAKSXTER® M31 Hydroponics

Effetti

- Repowering of plant programming capacity in favor of a greater productivity.
- Equilibrium of the vegetation, constant and homogeneous production.
- Increase in the plant's self-defenses against fungal, viral, bacterial and other diseases.
- Balance of climatic-nutritional and stress conditions.
- Better oxygen exchange and lymphatic flow, with consequential cellular regeneration and tissue elasticity.
- Root system strengthening.
- Increase in crop productivity, in favor of visual, organoleptic, nutritional aspects as well as shelf life.
- Better photosynthetic efficiency, water revitalization and pH regulation.

Product

BioAksxter® M31 Hydroponics is the magnetic flux fertilizer that programs the equilibrium of hydroponic, aquaponic and areoponic crops. Thanks to its advanced technology that reproduces natural processes, it regenerates vegetal structures by increasing plant potential. In addition, BioAksxter® depollutes and revitalizes the water, and it substantially increases the quality and quantity of yields. It is specific for the best results of all hydroponic, aquaponic and aeroponic crops.

Action

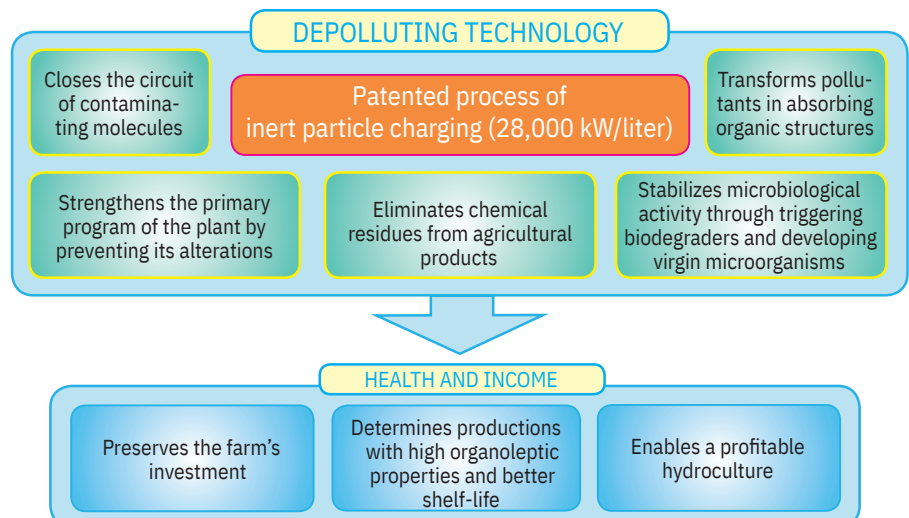

BioAksxter® M31 Hydroponics reproduces the processes of natural fertilization that occurs through water-soil-plant-air exchanges. BioAksxter® M31 Hydroponics is an inorganic compound that, when diluted in water, forms a pre-organic compound through self-reproduction of "virgin" microorganisms. It is readily assimilable by the plant of which it favors "hydropony" of nutrients, plant's programming capacity, oxygen exchanges, light absorption, regulation of lymphatic flows, and finally cell regeneration. All this translates into greater plant vitality and ultimately in the best productive results.

Unique Depolluting Technology

BioAksxter® M31 Hydroponics makes up for the insufficient low-impact supply chain because the simple introduction of this advanced technology into cultivation practices closes the circuit of input contaminant molecules, bringing crops back into balance. Its use eliminates chemical residues, environmental pollutants and harmful substances in agricultural products; it lowers basic radioactivity by preventing alterations in the plant's primary program, and consequently, phenomena of deformation and loss of self-defenses. The pollutants are transformed into organic absorption structures, and it is possible to notice a rebalancing in the microbiological activity as biodegraders are triggered. BioAksxter® M31 Hydroponics is not limited to low environmental impact, it goes further, opening the frontier of depollution.

Increases in Quality & Quantity

Without having to change agronomic techniques, methods and intervention plans, BioAksxter® M31 Hydroponics increases production in terms of weight, with better homogeneity and less waste. Taste, visual aspect and shelf-life are improved. It reduces spoilage of production by extending harvest days. It enhances the plant's self-defenses by simplifying pest management. Agricultural production increases in significant percentages that can vary from 40% to 100%.

Technical Information BIOAKSXTER® M31 Hydroponics

Formulation	BioAksxter® M31 Hydroponics is characterized by the patented process of inert particle charging, a technology created by researcher Alessandro Mendini, that, by reproducing natural processes, makes available energy useful to the strengthening of the plant program and to the related equilibrium.
--------------------	---

Composition	<ul style="list-style-type: none"> • Crystals Base - specific compound for BioAksxter® consisting of specialized minerals for universal plant programming in general (Mendini formulation) • Magnetic charges of hydrocompressed computerized type with a capacity equal to 9.8 Gigawatts/mm³ (Mendini discovery) • Water • Sodium molybdate 4.5-5.5% • pH 6.5-7
--------------------	--

CE Marking	<p>PFC 1(C)(II)(a): STRAIGHT INORGANIC MICRONUTRIENT FERTILISER Micronutrient solution fertiliser 2% Molybdenum (Mo), as sodium salt, water soluble Can be used in organic farming according to the current European legislation</p>
-------------------	---

Depolluting Technology	<p>The depolluting technology of BioAksxter® M31 Hydroponics, based on the patented process of inert particle charging with energy equal to 28,000 kW/liter, closes the circuit of contaminant molecules and transforms pollutants substances into organic adsorption structures. It stabilizes soil microbiological activity through triggering biodegraders and developing “virgin” microorganisms. It strengthens the plant’s primary program by preventing alterations and loss of self-defenses. Finally, BioAksxter® eliminates chemical residues from agricultural products protecting nutritional and healthy properties.</p>
-------------------------------	---

How to use	Type of crop	Dose	Application
	Hydroponics	1 milliliter per liter of water/circulating nutrient solution	Every 7 days during the entire cultivation cycle
	Aquaponics		
	Aeroponics		
<p>The number of interventions and dosage are indicative and vary, according to instructions, based on the context, type of crop and its duration. In the case of crops affected by resistant plant diseases, it is essential to double the dosage of the first 3 interventions. In the new systems, a triple-dose preparation intervention is appropriate or according to technical evaluations. It is miscible with all other products and can be distributed either via root or foliar application. Even in higher doses than indicated, it never damages the plant. Any changes in color are due to variation in the Earth’s magnetic field. BioAksxter® is free from harmful effects.</p>			

Item Code	Description	Packaging	Net weight
M31I-Mo/5L	BioAksxter® M31 Hydroponics	5 liter tank	Kg 5.150
