

Product Data Sheet

BIOAKSXTER® M32 Gardening

Benefits

- Reinforces the vital functions of plants.
- Accelerates root and leaf growth.
- Makes the vegetation more luxuriant.
- Improves the quality and quantity of flowers, fruits and vegetables.
- Slows down the natural deterioration of the crop.
- Improves plants' resistance to diseases.
- Increases plants' resistance to environmental stresses.
- Favors growth in areas with a low light level.
- Allows rapid recovery action from shocks states.
- Ensures optimal rooting and well-balanced turf growth.
- Revitalizes and softens the soil.
- Optimizes composting.

Product

For those who cultivate with passion, here is a unique product on the market in terms of innovation and technology: the natural organic magnetic flux fertilizer that increases soil productivity and restores energy and balance to all kinds of plants. Its depolluting formulation reproduces natural fertilization processes and restores vital plant and soil balances compromised by harmful substances released into the environment.

Designed for hobby use, it is indispensable for urban gardens where pollution is greatest and insuperable in the natural cultivation of potted or garden flowers, ornamental and bonsai plants, fruit plants and vegetables in the field and in pots.

BioAksxter® M32 Gardening is the noble nutrition for every type of plant, not the usual derivative from decomposed or chemically synthesized structures.

It is the best food for the life of plants and all other living structures that feed on them, including the human species.

BioAksxter® M32 Gardening is the only biological depolluting fertilizer.

Highly specialized minerals, water and energy, elements of natural fertilization, are the basis of this technological product capable of balancing the plant's vital processes and regenerating the soil's vital structures, just like in Nature.

Did you know that....

When BioAksxter® M32 Gardening is diluted in water, it forms a "predigested" compound, a kind of "baby food" for the plant, that is readily assimilable and able to also act on the soil, revitalizing it, increasing its volume and maintaining its moisture content.

As a regulator of photosynthesis, it enables balanced plant growth even in environments with shortage of light, improving oxygenation.

Its highly effective action makes it special both in the cultivation of potted flowers and garden flowers, indoor plants and bonsai, as well as in the vegetable garden or greenhouse where BioAksxter® restores agricultural products rich in healthy properties.

It allows, in a totally natural way, the development of plants to their full potential and the full expression of their organoleptic and nutritional characteristics.

This innovative fertilizer formulation is particularly suitable for the optimal development of all house, vegetable and garden plants, allowing for greater results, savings and well-being.

BioAksxter® M32 Gardening is a pet friendly product: it also makes the environment healthy for your pet.

Those who cultivate with passion can, at last, get the best.

Unique Depolluting Technology

BioAksxter® M32 Gardening makes up for the insufficient low-impact supply chain because the simple introduction of this advanced technology into cultivation practices closes the circuit of input contaminant molecules, bringing crops and soil back into balance. Its use eliminates chemical residues, environmental pollutants and harmful substances from fruit and vegetables; it lowers basic radioactivity by preventing alterations in the plant's primary program, and consequently, phenomena of deformation and loss of self-defenses. In the soil, pollutants are transformed into organic absorption structures, and it is possible to notice the rebalancing in the microbiological activity as biodegraders are triggered.

Advantages

More concentrated: 500 liters in a single liter!

More capacity for action: the only one with activated minerals

More results: beauty and health of your plants

More saving: each liter of fertilizer solution costs a few cents

Less dosage: little to get a lot (1 cap for every 4 liters of water)

Fewer applications: one treatment every 7-10 days

Less waste... to be disposed of

Less pollution: BioAksxter® purifies soils and consequently waters

More wellness: it improves food quality of fruits, vegetables and processed food

Technical Information BIOAKSXTER® M32 Gardening

Formulation BioAksxter® M32 Gardening is characterized by the patented process of inert particle charging, a technology created by researcher Alessandro Mendini, that, by reproducing natural processes, makes available energy useful to the strengthening of the plant program and the microbiological balance of the soil.

Composition

- Crystals Base - specific compound for BioAksxter® consisting of minerals formulated for universal plant programming in general (Mendini formulation)
- Magnetic charges of hydrocompressed computerized type with a capacity equal to 7.6 Gigawatts/mm³ (Mendini discovery)
- Water
- Sodium molybdate 4.5-5.5%
- pH 6.5-7

CE Marking PFC 1(C)(II)(a): STRAIGHT INORGANIC MICRONUTRIENT FERTILISER
Micronutrient solution fertiliser
2% Molybdenum (Mo), as sodium salt, water soluble
Can be used in organic farming according to the current European legislation

Depolluting Technology The depolluting technology of BioAksxter® M32 Gardening, based on the patented process of inert particle charging with energy equal to 24,000 kW/liter, closes the circuit of contaminant molecules and transforms pollutants into organic adsorption structures. It stabilizes soil microbiological activity through triggering biodegraders and developing “virgin” micro-organisms. It strengthens the plant’s primary program by preventing alterations and loss of self-defenses. Finally, BioAksxter® eliminates chemical residues from agricultural products, protecting nutritional and healthy properties.

How to use	Quantity	Application
	Watering: 1 cap per 4 liters of water	Every 7-10 days throughout the growing season
	Irrigation: 100 ml per 50 liters of water	Every 7-10 days throughout the growing season
	Nebulization/spray: 200 ml per 20 liters of water	Every 7-10 days throughout the growing season

The doses indicated can be distributed indifferently either via foliar or root application, by any means available and in any weather condition.
If highly concentrated distribution systems are used (nebulization/spraying), it is recommended to irrigate before or after the treatment, in order to ensure its action.
BioAksxter® M32 Gardening is miscible with any other product.
Doses higher than those indicated never damage the plant.
It is completely safe to handle and has no harmful effects.
For surfaces larger than 300 sqm, the use of the professional line is recommended.
